PROFESSIONAL SUMMARY

Senior Software Engineer with 8 years shipping scalable, event-driven microservices on AWS and GCP in PCI DSS-compliant environments at Nordstrom. Accelerated delivery by designing CI/CD pipelines and Kubernetes automation that standardized release processes across multiple services. Early adopter of LLM-powered engineering automation, experienced mentor, and full-stack engineer comfortable owning projects end-to-end.

SKILLS

Languages & Frameworks: Java, Spring Framework, TypeScript, Node.js, React.js, Next.js, Electron, Vite, PostgreSQL

Cloud & Infrastructure: AWS, GCP, Vercel, Kubernetes (GKE/NSK), Docker, Terraform, HashiCorp Vault, Kafka, SQLite

AI / LLM Tooling: Claude Code (Anthropic), LLM-powered workflow automation, prompt engineering, AI skill development

DevOps & CI/CD: GitHub Actions, GitLab CI, Reusable workflow design, ServiceNow change management

Security & Compliance: PCI DSS, secrets management, IAM, OAuth2 / OIDC

Leadership: Technical mentorship, cross-team collaboration, onboarding documentation, project leadership

EXPERIENCE

Senior Software Engineer

Nordstrom • Denver, Colorado • June 2018 – April 2026

- Pioneered LLM-powered engineering automation using Claude Code (Anthropic), authoring a skill library that automated JIRA workflows, PagerDuty triage, ServiceNow change requests, and deployments — eliminating hours of manual overhead per week across the team.
- Designed and implemented reusable GitHub Actions CI/CD workflows for Kubernetes (GKE/NSK Barge) deployments, reducing average deployment time and standardizing release processes across multiple services.
- Built and maintained event-driven microservices on Kafka and AWS supporting payment ingestion pipelines that process high-volume financial transactions in PCI DSS-compliant environments.
- Architected infrastructure-as-code solutions using Terraform and HashiCorp Vault for secrets management across nonprod and production AWS environments.
- Mentored junior engineers, conducted code reviews, and produced onboarding documentation that accelerated ramp-up time for new team members.
- Led a full ML pipeline migration from Airflow to Vertex Pipelines on Google Cloud Platform and GKE, partnering with Data Scientists to maintain and harden their pipelines post-migration.

PERSONAL PROJECTS

Muvic — macOS desktop app for DJs (in active development)

Personal project • April 2026 – Present

- Syncs DJ Spotify playlists into Beatport and Bandcamp carts and wishlists, tracks every purchase across both platforms, and runs a freemium model with Pro licenses sold through Lemon Squeezy.
- Architected and built solo a 3-deployable TypeScript stack (Electron + React 19 desktop, Next.js on Vercel, Dockerized Express + Puppeteer sync service) with the full operational glue: Spotify PKCE OAuth, Lemon Squeezy licensing, Resend transactional email (7 typed events), telemetry, SQLite, and a GitHub Actions DMG release pipeline.

EDUCATION

Full Stack Development

Galvanize, Denver, CO • May 2018

Bachelor of Arts (B.A.) – Creative Advertising

University of Colorado Boulder, Boulder, CO • May 2014

Bachelor of Fine Arts – Ceramics

University of Colorado Boulder, Boulder, CO • May 2014
